

Regular service option reduces overall costs

As paper and board mills look to reduce overall costs in the face of challenging market conditions, regular service visits have become even more important, says Andy Barnes, William Kenyon's UK Sales Manager.

A typical visit would include working with a mill supplied fitter, rectifying alignment issues and replacing pulleys showing signs of tired bearings. This helps reduce the work load of engineering and production departments during shuts and is a cost effective way of reducing potential downtime.

Said Andy: "We are increasingly being asked to send out our technicians to provide routine maintenance on machine rope systems. This service has

proved particularly beneficial in a number of European and UK mills.

"The expertise of our personnel in relation to problem solving, design and supervision of installations is invaluable to many customers and it has helped them keep rope related stoppages to a minimum."

Apprentice appointment success

Congratulations to young apprentice Joe Cartwright who has successfully completed his NVQ Level 2 in Manufacturing Operations. Joe was recruited last year and is the most recent addition to the William Kenyon team.

As part of the company's ongoing programme of cross training, he will now commence an NVQ Level 2 in Performing Engineering Operations before

undertaking a Level 3 in Engineering Maintenance. The training is provided by Skill Solutions at Tameside College.

Vertical tensioner is a hit with customers

The launch of a new vertical tensioner design earlier this year has received a very positive response. The double rope pass design allows for additional take-up capacity where space is limited. It has proved an ideal solution for a number of customers. Multiple installations have now been scheduled between October 2013 and the end of the year.

For more details on this, and the whole range of William Kenyon ropes, equipment and accessories, please visit www.williamkenyon.co.uk
