

New website goes live Clearer navigation and refreshed style

William Kenyon has updated its website to make it easier to navigate. Simple links and buttons from the home page allow information on products, services, sales agents and technical support to be accessed quickly. A more contemporary style also gives the site a modern look and feel.

As well as details on William Kenyon's range of carrier ropes, rope threading equipment and accessories, there is now information on the company's technical consultancy services (see story below).

A list of sales agents can be identified simply by selecting a country from a drop down menu.

A number of Splicing videos can be accessed via the Support page but customers must first request a username and password. Previous editions of The Thread can be downloaded from the News page.

A busy summer ahead

Increased customer demand for new rope threading solutions means William Kenyon is looking forward to an exceptionally busy summer period.

Most of the new work is scheduled to take place in the UK, Italy and France during August and early September. Projects in the pipeline include the installation of independent rope systems designed to improve runnability as well as the rebuilding of transfer areas to provide more reliable tail feeding and the facility to add extra safety guards. The work highlights the company's position as a market leader in rope threading technology and its capability to provide solutions to problematic threading issues on different types of paper and board machines.

Technical consultancy services cover design, installation and servicing

William Kenyon is offering technical consultancy services to its customers covering the design and implementation of rope systems on paper and board machines. The company is the only carrier rope manufacturer currently providing advice on how to optimise threading performance and improve rope life.

Services include advice on system design, supervision of equipment installation, surveys to evaluate current configurations and regular site visits for general maintenance during machine shut downs.

Said William Kenyon Sales Manager Andy Barnes: "Our technicians can suggest tried and tested methods that have benefited paper and board mills worldwide. With our input we know customers can improve threading and reduce rope related downtime."

Data Sheets

William Kenyon has produced a series of data sheets on carrier ropes, system equipment and splicing tools. If you would like copies call the Sales Team on: +44 (0)161 308 6030.
